Editorial, Reviews, Tutorials and Intervi	iews 1

After a bit of a drought in product, January became very much a month of doing reviews. And a diverse range of products it was oo!

There are cameras of all different types - from "standard mirrorless, full frame models like the Panasonic LUMIX S5X II and Canon EOS R8, through to a special sports tracking camera and even a dedicated planetary camera.

All of these are included in this edition

Of course there had to be a gimbal in there too.

However I did find the time to put together the special edition Drone e-Magazine and the take up has been very gratifying - thank you! (If you are not aware of it yet, this is a free download and you can get it at https://cre-8.com.au/e-mag-download/ where you'll also find the free GoPro e-Magazine.)

Finally it appears there is stil a bit of a gremlin in the system with regards to the weekly newsletter getting sent multiple times. I am looking at this as we speak and will get it sorted I promise and apologies.

As always, thanks for the support. And please feel free to contact me with any suggestions or gripes.

David Hague Managing Editor / Publisher

### **Review: Panasonic LUMIX S5X II**

#### Possibly the best I have used

In my experience, the majority of Probably the video formats are the via a tethered USB port. originally designed for still photog- this full frame hybrid camera can raphy first and video has been a shoot 4K 60p 4:2:2 10 bit and supsort of afterthought. As the usage of ports 6K RAW output in ProRes 422 if dedicated video cameras / cam- you plug in a USB based SSD recordcorders has dwindled though, more er. I successfully used a Samsung T5 emphasis has been placed on the I normally have on my Blackmagic video side of things.

#### Design

Personally, I am still of the opinion the design of a dSLR / mirrorless is not ergonomically suited to the rigors of video shooting – although the addition of a gimbal such as the Zhiyun Cinepeer Crane 4E helps a lot – but the Panasonic LUMIX S5IIX shows that technically at least, they have caught up to a dedicated unit quite substantially.

Where to start?

mirrorless cameras were best place as via its 24.2MP sensor Design Pocket Cinema Camera 6K.

> Speaking of which, the LUMIX S5IIX can also shoot Blackmagic RAW, but you do need a dedicated Blackmaaic Video Assist unit if you wish to do that. Additionally, HFR/ VFR 10 bit are supported as is V-Log.

#### SSD Supported

If no SSD is available, you can record to dual UHS-II slots. The ability to record proxy files whilst shooting makes maximum use of this feature. You can also live stream via WiFi or

Panasonic claim that as long as the ambient temperature is kept below 40° C, overheating will never be a problem.

#### **Auto Focus**

The auto focus system is impressive too, with a 779-Point Phase-Detection AF System. This ensures fast and accurate focusing on subjects, improving the quality of both still photos and video footage.

To minimise any camera shake a 5-Axis Sensor-Shift Image Stabili-

#### Review: Panasonic LUMIX S5X II (cont'd)

sation is used.

Other notable features include a 9 fps manual shutter or 30fps electronic one which is ideal for wildlife and sport shooters.

To view your images whilst shooting, there is a 3.68m-Dot 0.78x-Magnification OLED Live View Finder and a 3.0" 1.84m-Dot Tilt/Free-Angle Touch-LCD. Both were eminently usable in bright sunny conditions.

#### Weather Sealed

Speaking of sunny, the LUMIX S5IIX is fully weather sealed and

rain, dust, and snow.

The review model I have is married For the professional, at around to an 85-200mm lens, almost per- AUD\$3K for the body only, the price fect for my preferred shooting, and is not in the stratospheric range, and beautifully balanced. All the con- you can get it with a 20-60mm lens trols are logically placed, but one for about AUD\$3500 (although I did criticism is that the titling on each is find prices cheaper than this online not the standard white but a more so shop around). grey-ish colour etched into the buttons and dials. This makes them a little hard to read what your setting is in less than perfect light, although I accept you'd learn pretty quickly which button is which.

Another issue I had was the flap cover for the mic and headphone ports wouldn't close and stay shut, which was irritatina.

#### The Best?

Accepting these things though, the LUMIX S5IIX is possibly the best full

resistant to weather conditions like frame camera I have had the pleasure of using.

The LUMIX \$511X has a 5 year warrantv.

#### Conclusion

I'd urge you to go to your local retailer and have a look and a play in store, and after doing so, I suspect you'll be as impressed as me.

For more information, see the Panasonic LUMIX website

### **Review: Zhiyun Cinepeer Crane 4E**

Well priced and very, very functional

### Camera Support

series of gimbals has long been touted as the industry leader. And with good reason. I have had the RS4 Pro for some time, with complete all the accessories you can get. And whilst average user would never go to this extent and need

But Zhiyun also make some very impressive aear and seem to release it at a huge rate of knots. Latest to cross my desk is the new Zhiyun Cinepeer Crane 4E, a lightweight version of the respected Crane 4.

The Cinepeer Crane 4E supports an impressive array of camera makes and models right out of the box, such as those from Canon, Sony, Panasonic and Nikon, including full frame models like the Canon C70. From my own point of view, it also supports my Blackmagic Cinema Pocket Camera 6K Pro and Canon 5DS (but sadly not my Fujifilm X-S10).

### One thing Zhiyun has concen-

trated on across all its latest models is ergonomics and ways of reducing operator fatigue. My review version did not come with the wrist rest or sling system that Zhiyun says decreases effort by 50%, but nonetheless I was able to operate the Crane 4E for a 20 minute stretch without too much issue, even with my dud right wrist (post carpal tunnel surgery v'know!).

If you wondered, the Sling Mode allows for adjustment of the grip's length and direction, making changes in shooting angles much easier and giving a dualhandle mode for different filming options.

review

#### **Review: Zhiyun Cinepeer Crane 4E (cont'd)**

#### **Negates Bad Ergonomics**

My one complaint about using dSLRs and mirrorless cameras for shooting my own thing, motorsport, is almost negated by the use of a aimbal and sling system, and the smoother motion you get is of course a bonus.

For those that (for some reason) prefer to shoot in a vertical format, the Crane 4E has a clever orientation switching design without needing to add extra accessories, thanks to the intearated quick-release structure, thus saving time and increasing charge. efficiency.

For those with compatible cameras, Bluetooth shutter control is available and there is an allin-one follow focus system via a

ments of camera parameters support bracket and screws, two sually hunt these down as some and compatibility. ening pad, Panasonic control cable, USB-C cable and even a M4 Allen key plus a Quick Start Guide.

#### Balancing

Balancing a camera on a gimbal has become second nature has a fast-charging 2600mAh to me these days, but I have to battery allowing for a full charge say the Crane 4E is one of easiest in around 2 hours and giving 12 and fastest I have come across. One thing, that on the surface might seem minor, but in the real world makes a heap of difference, is clear diagrams showing where the unlocking switches for each arm are.

built in wheel for guick adjust- 4E, a screw in tripod mount, lens So many times, I have had to vi-

All the operation controls are self-evident, and the touch sensitive display screen is very easy to read and follow in order to set everything up correctly. In fact, I was up and running within 10 minutes at most.

#### Conclusion

If you need a topflight gimbal, have a look at the Cinepeer Crane 4E. Take your camera with you and try it out in your local Camera House or wherever. I am sure you will be pleased with what you see and get for your AUD\$699.

# Astrophotography

Part 3a

In my quest to get some half deastrophocent tography images, I came across something didn't know existed. It is from a company called ZWOandiscalled a Planetary Camera.

The company makes a range of on the telescope, the camera is and a video is shot for a these, and the one I was advised inserted with a USB-C cable conpredetermined time to try was the AUD\$279 Model necting it to a computer. You can either set this or let the computer deter-662. The resultant image the camera mine the time. Oh, and if you could register and give me a like, it will be greatly appreciated (and any suggestions too of course)!

## **Editorial, Reviews, Tutorials and Interviews**

While some people like to read reviews or see a tutorial in written form, more and more are obtaining their information via videos.

Earlier this year, I decided to expand what Creative Content / Australian Videocamera offered by including video tutorials and reviews, broadening this out to editorial and interviews as and when time and access to relevant content becomes available.

I also identified that the attention span of many is not long; for reviews, probably around 5 – 7 minutes. Consequently, all the videos I created are short form only.

This is NOT the complete list, but the more popular videos - for an absolute up to date and complete list of all the available videos, please visit my CC-TV web page or YouTube channel
